# UPDATING DATA BASES FOR MODELING ARMY COLLEGE FUND AND MONTGOMERY GI BILL USAGE

## EXECUTIVE SUMMARY

---

### Research Requirement:

The U.S. Army must be able to measure the effects of educational benefit programs on enlistments. The Army College Fund (ACF) data base and the Montgomery GI Bill (MGIB) data base will allow the Army to analyze ACF and MGIB usage based on a broad array of individual-level demographic and educational factors. These data bases will also permit the Army to estimate the cost of the educational benefit programs.

### Procedure:

The data bases to be updated for modeling ACF and MGIB usage consist of individual-level (micro) observations. These data bases will be updated by merging information on veterans contained in the Defense Manpower Data Center (DMDC) Enlisted Cohort files and DMDC MGIB files with additional data from the benefits and banking records of the Department of Veterans Affairs.

Specifically, the ACF data base is updated with FY1994 VA benefit usage data and tour outcomes (e.g., reenlist, separate) information from the FY1994 Gain/Loss files. The MGIB data base was updated quarterly during FY1994 using the DMDC MGIB master file records. Documentation of variables included response categories, sources of data, methods used to select cases, and any other information pertinent to subsequent analyses.

### Findings:

The ACF data base has microlevel data bases on soldiers who enlisted between fiscal years 1981 and 1985, including Department of Veterans Affairs (VA) educational benefits usage information as of September 1994. It is a longitudinal data base that is divided into three parts: the FY81/82 accession cohorts, the FY83/84 accession cohorts, and the FY85/86 accession cohorts. The first set of cohorts has 235,663 records and 299 variables. There are 251,498 records and 291 variables in the second set of cohorts. The last set of cohorts has 244,970 records of 307 variables.

The MGIB data base contains microlevel data on soldiers who enlisted in the Army after 1 July 1985 and enrolled in the MGIB

program. There are 945,655 records and 38 variables in this data base as of December 1993.

#### Utilization of Findings:

The ACF data base and MGIB data base can be used to measure ACF and MGIB benefit usage and to forecast future usage. This is an essential aspect of estimating the cost effectiveness of these programs.

# Updating Data Bases for Modeling Army College Fund and Montgomery GI Bill Usage

## Introduction

The Army implemented the Army College Fund (ACF) in fiscal year 1981 (FY81). This program supplements two educational benefits programs available to all soldiers, the Veterans Education Assistance Program (VEAP) from FY81 through FY85 and the Montgomery GI Bill (MGIB) since FY86. The U.S. Army Research Institute for the Behavior and Social Sciences (ARI) conceived the development of two data bases to make available data on the usage behavior of soldiers in these educational benefit programs. These data bases are the ACF data base and the MGIB data base. They allow the Army to analyze usage behavior of a broad array of individual level demographic and educational factors.

This report described the updating of the Army College Fund (ACF) and Montgomery GI Bill (MGIB) data bases. The first database contains micro-level data on soldiers who enlisted between FY81 and FY86 and were eligible for the ACF participation; and the second contains micro-level data on soldiers who enlisted after 1 July 1985 and enrolled in the Montgomery GI Bill program.

## Army College Fund Data Base

As part of the effort to analyze the usage of the Army College Fund program and related re-enlistment/attrition experience, data from various sources were processed regularly to update the existing cohort databases: the FY81/82 accession cohort, the FY83/84 accession cohort, and the FY85/86 accession cohort. These data sources included the Enlisted Master File (EMF) from Military Personnel Center (MILPERCEN), the Cohort Files from Defense Manpower Data Center (DMDC), and Chapter 32 (active duty MGIB program) Educational Benefit data from the Department of Veterans Affairs (VA).

The ACF/VEAP database has been updated on an annual basis since 1986. It was created originally using the Accession Files from Military Entrance Processing Command (MEPCOM). The database is divided into three separate cohorts: the FY81/82 accession cohort, the FY83/84 accession cohort, and the FY85/86 accession cohort. The data for each cohort are updated annually using the latest information from the EMF, DMDC files, and VA Chapter 32 data. At each update, the critical information is first abstracted from each data source and then merged into the cohort database under a different set of variable names so that critical information would be preserved at each period. For example, variable BNFUSED7 is the 'VA Amount of Benefits Used' in 1992,

the seventh time-period covered by the data base; and BNFUSED9 is the 'VA Amount of Benefits Used' in 1994. This effort provides a longitudinal database capturing the ACF education benefit usage activities as well as re-enlistment and attrition information for each ACF participant over time. Appendices A through C provide descriptions of the variables in ACF cohorts data bases.

As of March 1995, these cohort databases are updated with the September 1994 Montgomery G.I. Bill data, the March 94 DMDC Cohort files, and the September 1994 EMF file. The September 1994 Chapter 32 data tapes contained a total of 3,582,596 records. Note, however, that the September 1993 Chapter 32 data have not been received. This data, upon arrival, will be processed in the next processing cycle.

#### Montgomery GI Bill Data Base

The Montgomery GI Bill (MGIB) database is updated quarterly using the MGIB data files from DMDC. Unlike the ACF data base, however, it is not longitudinal. Each update is a cross section in time. This database was started in 1991 and was originally updated annually. In March 1993, a quarterly updating process was initiated. Unlike the ACF/VEAP database, each of the annual/quarterly MGIB files was processed and edited separately. This effort allows the analysis of the MGIB usage at each given time point, i.e., quarterly. As of March 1995, four additional quarterly files have been processed and are available. These files contain the following number of records:

Date	Total Cases
1st quarter 1994	945,665
2nd quarter 1994	868,595
3rd quarter 1994	884,309
4th quarter 1994	895,492

During the processing of the 2nd quarter file, a reduction of 80,000 records was discovered in the data base. After checking with our point-of-contact at DMDC, we were informed that an effort was made at DMDC to clean-up some of the cases on the DMDC/MGIB database for soldiers who were not eligible for the benefit and were thus deleted from the DMDC/MGIB database.

Appendix D describes the variables in the MGIB data base. These variables include demographic factors, reenlistment and separation behavior, education benefit participation and usage behavior, and some Army career information.

## Summary of Data Bases

The ACF and the MGIG data bases exist as SAS files. They are maintained at the National Institute for Health (NIH) computer facility on standard label 3480 cartridge tapes. The data sets characteristics are described below:

### FY81/82 ACF Master System File
